

Cell structure

DEMO.BIO.01 | Synthetic classroom example

Cells contain cytoplasm and a cell membrane. Plant cells also have a cell wall.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Movement across membranes

DEMO.BIO.02 | Synthetic classroom example

Diffusion is the net movement of particles from higher to lower concentration.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Enzymes

DEMO.BIO.03 | Synthetic classroom example

Enzymes are biological catalysts. Temperature and pH affect enzyme activity.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Plant nutrition

DEMO.BIO.04 | Synthetic classroom example

Photosynthesis uses light energy to convert carbon dioxide and water into glucose and oxygen.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Human nutrition

DEMO.BIO.05 | Synthetic classroom example

Digestion breaks large food molecules into smaller molecules that can be absorbed.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Transport

DEMO.BIO.06 | Synthetic classroom example

The circulatory system transports substances around the body in blood.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Gas exchange

DEMO.BIO.07 | Synthetic classroom example

Alveoli provide a large surface area for gas exchange in the lungs.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Respiration

DEMO.BIO.08 | Synthetic classroom example

Aerobic respiration releases energy from glucose using oxygen.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Inheritance

DEMO.BIO.09 | Synthetic classroom example

Genes are lengths of DNA that influence inherited characteristics.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.

Ecology

DEMO.BIO.10 | Synthetic classroom example

A food chain shows the transfer of energy between organisms.

These original notes demonstrate source attribution. They are not an official examination syllabus and have not been independently reviewed for teaching use.
